

YUKON REPORTABLE DISEASES

List A	List B	List C	
As Soon as Suspected Report	Within one working day report	Within 3 working days report	
Botulism Diphtheria Gastroenteritis (acute diarrheal) outbreaks: all causes: bacterial; parasitic; viral e.g. norovirus Invasive group A streptococcal (<i>Streptococcus pyogenes</i>) infection Invasive <i>Haemophilus influenzae</i> disease Invasive meningococcal disease Measles Mumps Poliomyelitis Rabies Severe Acute Respiratory Syndrome (SARS) *Smallpox Tuberculosis Typhoid Verotoxigenic E. coli (e.g. O157:H7) enteric disease	Anthrax Cholera Food-borne illness: all causes Gastroenteritis: all causes (bacterial, parasitic, viral) Hantavirus Pulmonary Syndrome Hepatitis A Hepatitis B Legionellosis Lymphogranuloma venereum (LGV) infection Meningitis/Encephalitis (bacterial, viral or other) Pertussis Plague Rubella (includes congenital rubella) Syphilis Tularemia West Nile virus infection Yellow Fever †Any infectious agent potentially transmitted through blood transfusion, or transplantation of cells, tissues and organs.	Acquired Immunodeficiency Syndrome (AIDS) Amoebiasis Brucellosis Campylobacteriosis Chancroid Chicken pox (notify ASAP if contact of pregnant or immunocompromised person(s)) Chlamydia infection Clostridium difficile associated diarrhea (CDAD) ‡Creutzfeldt-Jakob disease (CJD) and variant Creutzfeldt-Jakob disease (vCJD) Cryptosporidiosis Cyclosporiasis Cytomegalovirus (congenital infection) Giardiasis Gonococcal infection (notify ASAP if ophthalmia neonatorum) Hepatitis C Hepatitis non-A, non-B, non-C Herpes simplex (congenital/neonatal infection) Human immunodeficiency virus (HIV) infection Influenza (human & avian strains)—notify ASAP if possible outbreak	Invasive pneumococcal (<i>Streptococcus pneumoniae</i>) disease Invasive group B streptococcal (<i>Streptococcus agalactiae</i>) infection Leprosy Listeriosis Lyme disease Malaria Methicillin resistant <i>Staphylococcus aureus</i> (MRSA) infection Paratyphoid Respiratory syncytial virus (RSV) infection Salmonellosis Shigellosis Tetanus Trichinosis Yersiniosis Vancomycin resistant enterococcus (VRE) infection

*Smallpox has been officially eradicated globally but remains listed in the event of possible bioterrorism acts.

†This is a new category of reportable disease to cover any emerging pathogens that could be transmitted by these means.

‡This prion disease remains rare in Canada (incidence about 1 per million populations). Since diagnosis can only be confirmed by brain biopsy or necropsy, all CJD-like disease should be reported at the first suspicion of illness to facilitate further investigation of etiology.

Note: Please report possible, probable, suspicious and confirmed cases within these time frames.

YUKON COMMUNICABLE DISEASE CONTROL
 # 4 HOSPITAL RD
 WHITEHORSE, YUKON, Y1A 3H8
