

# Yukon Palliative Care Program

## Clinical Tools

### Palliative Performance Scale (PPS)

The PPS is a great communication tool to describe a client's current functional level, has prognostic value and can be used for workload assessment and other measurements.

### Edmonton Symptom Assessment System (ESAS)

The ESAS is designed to help health care professionals assess common symptoms at the end of life. The ESAS elicits the patient's subjective perception using a numerical scale.

### Pain Assessment in Advanced Dementia (PAINAD)

The Pain Assessment in Advanced Dementia (PAINAD) was developed to assess pain in patients who are cognitively impaired, non-communicative, or suffering from dementia and unable to use self-report methods to describe pain.
