

VISIBILITY RATING IN COMMUNITIES

Communities:

In the communities, the AQHI is not available, but air quality can be assessed through the visibility rating posted on the Environment Canada website.

- Navigate to the community's weather page, for example, [Mayo](#).
- Under the Current Conditions you'll see the visibility rating.

▼ Current Conditions		Past 24 hours	Radar	Satellite	Lightning
 23°C °C °F	Observed at: Mayo Airport Date: 3:25 PM PDT Thursday 22 June 2017				
	Condition: Partly Cloudy Pressure: 102.3 kPa Tendency: Falling	Temperature: 22.7°C Dew point: 7.9°C Humidity: 38%	Wind: SSW 7 km/h Visibility: 32 km		

Using the visibility, Air Quality can be assessed as follows:

Visibility	Air Quality
15+ km	Good
5 to 14km	Moderate
2.5 to 4km	Unhealthy
1.5 to 2km	Very Unhealthy
Less than 1km	Hazardous

Using this method to assess air quality can be helpful to residents in the communities. Knowing the air quality helps residents plan their activities, enjoy a healthy lifestyle and manage health conditions.
